**Your excellencies, ladies and gentlemen, dear friends,**

It is my great honor to participate at the Shanghai Silk Road Health Forum and I want to thank Silk Road Cities Alliance to invite me to be here today and actively participate in this Forum.

The phenomenon of COVID 19 affecting all countries. In my country Serbia as in practically in all Europe there is a new wave of pandemic. We are very disposed to cooperate with all countries in the world and especially under the framework of the World Health Organisation to fight together the corona virus and bring with common efforts the optimal solutions in this battle.

Concerning the introduction of good methods and experience of epidemic prevention in Serbia has been opened Covid clinics in which the population can come and can make tests on corona virus. The infected persons are sent in COVID hospitals having in view the seriousness and degree of infection and health condition. The crisis headquarter for Covid which was introduced on the level of the country every day held the conferences about the number of the infected persons and places and cities where the infections are serious and where the infected are situated, Having in view those informations the capacity of the hospitals have been enlarged or reduced having in view the objectives needs. In all means of traffic transportations and closed places it is obligatory to wear the mask and there is a ban of gathering more than 40 persons with strict and obligatory distance. On the airports and border crossing to the citizens it is measured the body temperature and they are given the instructions about the further procedure in a case that they have the symptoms of corona virus. If it is proved that in the companies or schools have infected people we closed them and the infected are sent in isolation. The schools or some departments in the schools pass over on the online education. In laboratories of the clinic centers we make nucleic acid tests which do you need to have to travel in other countries. Covid hospitals in Serbia are transformed in the system of treatment advised by the Chinese experts and doctors. Also it is advised to wash the hands, disinfections of the spaces and having the distance. The celebrations and gathering of more than 40 people are forbidden. The working time of the cafes and restaurants is limited to 11 p.m. and the working time is changible having in view the number of infected people. Serbia is always ready to consult in the fight against the Covid with the foreign medical experts and specially with the Chinese who are the best organized in the battle against COVID and have the best results.

China has donated medical equipment and protection means and ensure on optimal prices the sold of the respirators. This equipment was not only have been donated by the Chinese State but also by the companies and Chinese citizens. China has sent the

assistance to the Serbia in a view of respirators and tests, masks and other protections materials. Serbia is greatfull for this donations. The Chinese experts donated to Serbia the most modern technology of two laboratories which are making the test on PCR method and this equipment was donated by the Chinese Institut BGI in the framework of the project Firy eye and enormously contribute against the fight of korona virus. Those laboratories can make 3000 tests per day and having in view this it is introduced the control on the sources of epidemic. The laboratories are situated in Belgrade and Nis and this is a project which China is conducting on the frame of the Initiative Belt and Road. This is the two most moderns laboratories in Europe for testing and in which it will be conduces the most contemporary technologies in analysis of nucleic acid. Serbia is greatfull that China choose this way for helping the Serbian people. We are geratful to the Chinese isnstitute BGI, Tencent Charity Fond and Zijin Mining Company for the donations of those laboratories. Also the Chinese team of medical experts spent 6 weeks in Serbia and gave great help to our country in fighting corona virus. They fight COVID 19 in Vuhan and come to Serbia from the first line of front. China and Serbia are not only partner in the common fight against korona virus but they are partners on the way of the economic recovery of Serbia. For us it is very important the cooperation in the framework of the Initiative Belt and Road and mechanism 17+1 China – CEEC.
